Largest of Three Numbers

1. Problem Statement

Read three numbers from the user and find the largest number using conditional statements.

2. Objectives

1. Read three numbers.
2. Compare the numbers using `if-elif-else`.
3. Identify the largest number.
4. Display the result.

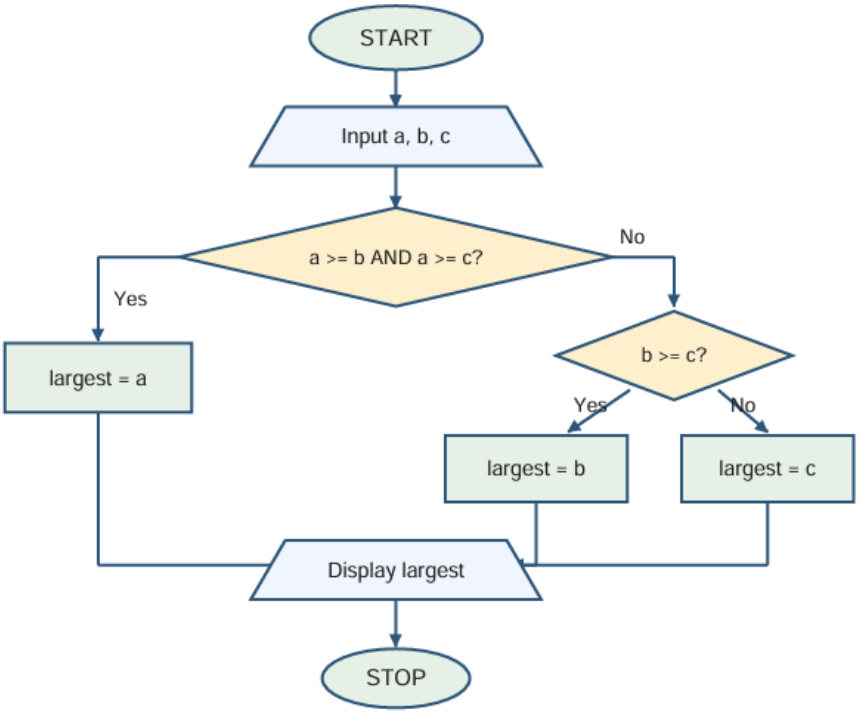

3. Assumptions

1. The user enters valid numeric values.
2. If two or more numbers are equal and largest, the program still displays that largest value.

4. Algorithm

1. Start.
2. Read three numbers `a`, `b`, and `c`.
3. If `a` is greater than or equal to `b` and `c`, largest is `a`.
4. Otherwise, if `b` is greater than or equal to `c`, largest is `b`.
5. Otherwise, largest is `c`.
6. Display the largest number.
7. Stop.

5. Flowchart

None

6. Pseudocode

None

```
INPUT a, b, c

IF a >= b AND a >= c THEN
    largest = a
ELSE IF b >= c THEN
    largest = b
ELSE
    largest = c

DISPLAY largest
```

8. Test Case and Expected Output

Input:

```
None
Enter first number: 15
Enter second number: 28
Enter third number: 21
```

Calculation:

28 is greater than 15 and 21.

Expected Output:

```
None
Largest number is: 28.0
```

9. Conclusion

The program compares three numbers and finds the largest using conditional statements.
