Attendance Recovery Computation

1. Problem Statement:
Calculate current attendance percentage and find the minimum consecutive classes required to reach 75% attendance.

2. Objectives:

- Calculate attendance percentage.
- Check exam eligibility.
- Find additional classes required.

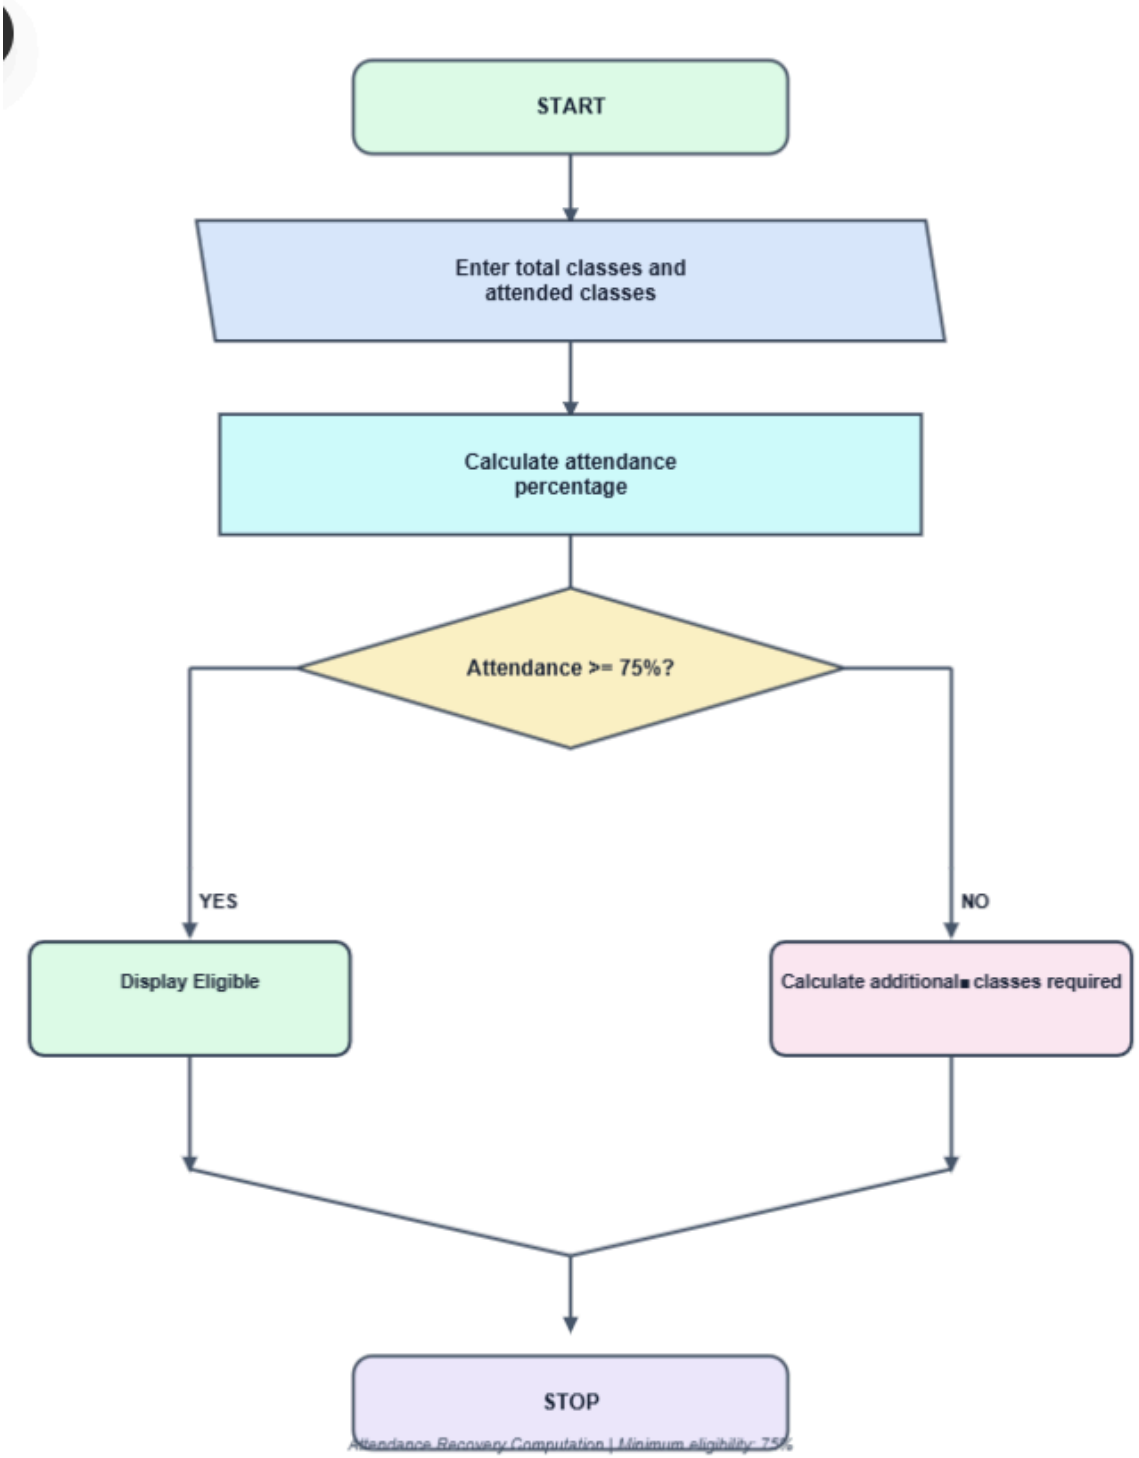

3. Assumptions:

- Minimum attendance required is 75%.
- Future classes are attended continuously.

4. Algorithm:

1. Start.
2. Enter total classes and attended classes.
3. Calculate attendance percentage.
4. Check whether attendance is 75% or above.
5. If yes, display eligible.
6. Otherwise, calculate minimum additional classes required.
7. Display the result.
8. Stop.

5. Flowchart:

6. Pseudocode:

```
None
START
```

```
INPUT total, present
percentage = (present / total) * 100
DISPLAY percentage

IF percentage >= 75 THEN
    DISPLAY "Eligible for exams"
ELSE
    required = CEILING((0.75 * total - present) / 0.25)
    DISPLAY required
END IF

STOP
```

8. Sample Output:

```
None
Enter total classes: 40
Enter attended classes: 25
Current Attendance: 62.5 %
Minimum classes to attend: 20
```

9. Test Cases:

Total	Present	Expected Result
40	25	20 more classes
40	30	Eligible
50	35	Eligible
60	30	60 more classes

10. Conclusion:
This program calculates attendance percentage and determines the minimum consecutive classes needed to achieve 75% attendance.
